# CS3307A Form C: AI-Use Disclosure

Submitted with every deliverable, by every team, whether or not generative AI was used

Object-Oriented Design & Analysis · Fall 2026 · Instructor: Dr. Umair Rehman

| | |
|---|---|
| **Who** | Every team: one form per team for each deliverable. A student working individually signs alone. |
| **When** | With Deliverable 1, Deliverable 2, and Deliverable 3, as a separate PDF. |
| **How** | Fill in this page or reproduce it in your own document, keeping the headings, questions, and declaration. A typed full name is accepted as a signature. |

Generative AI is permitted for project work in CS3307A when its use is transparent and you remain responsible for the quality, correctness, and intellectual defensibility of what you submit (course outline, Section 7). Where generative AI materially contributes to assessed work, you must identify the tool used, the general purpose for which it was used, and the nature of the contribution made by the tool. This form is how you do that. Disclosed, permitted use does not reduce your mark.

| **Author(s)** | Liam Wray, Abdul Hasna |
| **Deliverable** | ☐ Deliverable 1 ☑ Deliverable 2 ☐ Deliverable 3 |

### 1. Summary

☐ I/we did **not** use generative AI tools in producing this deliverable. (Sign below; leave Sections 2 and 3 blank.)
☑ I/we used generative AI tools as described below.

## 2. Record of use

One row for each distinct tool and purpose. Material contributions include generated or substantially rewritten code, tests, diagrams, requirements, or report text, and design suggestions that you adopted. Routine spelling and grammar correction and ordinary IDE autocompletion of a single line need not be listed.

| **Tool and version** | **Purpose** (e.g. brainstorming, code generation, debugging, refactoring, test cases, documentation) | **Where in the deliverable** (files, classes, diagrams, report sections) | **Nature of the contribution, and what you did with it** (what the tool produced; how you checked, corrected, or adapted it) |
|---|---|---|---|
| Chatgpt Pro | Verifying UML diagram correctness | Diagrams | Checked UML multiplicity and if there were any errors regarding the relationship between classes |
| Chatgpt Pro | Debugging errors | Files | Had an error when implementing IGame into Poker and Blackjack, AI helped fix the error |
| Chatgpt Pro | Verifying code syntax | Files | Verifying the syntax of implementing the GameFactory was correct |
| | | | |
| | | | |
| | | | |

## 3. Verification

Describe one instance in this deliverable where a tool's output was incorrect, inappropriate for your design, or otherwise rejected (for example incorrect code, a fabricated API, an insecure implementation, or a pattern that did not fit), how you recognized the problem, and what you did instead. If there was no such instance, explain how you verified the output you did use.

I asked the tool (Chatgpt Pro) to help integrate my IGame with GameManager, so IGame specified which methods would be implemented by the Poker and Blackjack games. IGame would also interact with GameManager because GameManager owns the game and IGame is in charge of ensuring which methods are in each game. The goal was to have GameManager call methods from IGame without knowing which game is active.

The suggestions the AI tool made were not correct and did not follow my instructions, so instead I utilized the notes from class and the code examples to correct the syntax and structure in my game design.

## Declaration

I/we confirm that this disclosure is complete and accurate; that all AI-generated content included in this deliverable has been checked; that I/we take full responsibility for everything submitted; and that every author can explain and defend it. I/we understand that misrepresenting AI-generated content as entirely one's own work without the required disclosure may constitute a scholastic offence.
